CakePHP, Joomla, Drupal, Magento, Salesforce, MongoDB, PostgreSQL, SQLite, Scrum, Varnish Cache, FuelPHP, Caddy, Less, CoffeeScript, TypeScript, React, Handlebars, Vue, Memcached, Ember, Underscore, Travis CI

Rovertown

Dec 2021 – Nov 2022

Full Stack Software Engineer

This is a company that designs apps for C-stores, so they can better engage with the customers, such as through promotions, and loyalty programs, etc. I worked on the redesign project in a fast-paced environment, where I had to keep up with existing features and implement new features for the redesign concepts, as well as a lot of frontend adjustments, such as moving away from their older libraries, and onto newer code, etc. Lots of meetings, collaborating with the design team via Figma, Slack, and Jira. Lots of PHP, MySQL, Laravel, AWS, Alpinejs, Tailwind, HTML5, CSS3, JavaScript, and Livewire.

Turn Key Systems

Dec 2017 – Dec 2021

PHP Developer / Full Stack Developer

This is a marketing company. Lots of AWS (EB, S3, RDS, EC2, Cloudfront, Redis, IAM, Route 53). Lots of Infusionsoft CRM. Lots of PHP, MySQL, Apache, Wordpress and Laravel. A bunch of JS, CSS3 and responsive design. A bunch of PCI compliance, and AWS cost reduction. Various tracking services. A bunch of Windows Server (IIS, Microsoft SQL) and interacting with XMLRPC SOAP APIs written in ASP.NET/C#. Lots of Git, SSHing and git pulling. Lots of configuring Apache servers, local development environments, DNS, cronjobs, helping co-workers, and lots of “firefighting” due to the small dev team. I did lots of work on landing pages, order pages, responsive designs, agreements (DocuSign, eSign Genie), videos, and internal apps used by other employees from within the company. Some Java interaction, a bit of Python, Angular, Node, Webpack, Gulp, and Elixir.

Jetsetz

Feb 2017 - Apr 2018

Full Stack LAMP Web Developer

This was a private contracting job where I worked directly with the client on his travel-related start-up. I made the requested changes, and added new functionality such as pre-populating geolocation fields. I also did some Linux administration where I moved from one server to another, upgraded from PHP 5 to PHP 7, added Redis cache, refactored the code to make it cleaner and more manageable, fixed a bunch of bugs, and fixed inconsistencies in the system.

DiegoDev Group

Jan 2017 - Jun 2017

Full Stack LAMP Web Developer

This was a private contracting job where I worked for their clients through tickets and we had internal meeting weekly. This was mostly bug fixes and engaging directly with the primary client’s operations and fulfillment teams. A lot of work went into communication, figuring out how things currently work, communicating how they work, then if needed, following up and making changes regarding how they want it to work. There were many requests like the unmerging of unrelated users that had gotten merged, adjusting database queries to make reports faster, and feature requests such as agreements, etc.

Emenudeo

Jan 2014 - Mar 2016

Lead Developer

This was an e-commerce start-up project, where I also managed the team, to make a competitor to ML(Mercadolibre). We experimented with osCommerce, WooCommerce and Magento. I built basic functionality like the ability to list items up for sale, login/registration, shopping cart, profiles, uploads, and comments. The client ran out of funds unexpectedly when the investor bailed.

Xzist

Oct 2012 - May 2013

Lead Developer

This was a premium SEO tool, built on top of the LAMP stack, allowing internet marketers to manage and implement campaigns using features such as a broken link checker, website analysis, social media updater, keyword research tool, and competitor analysis tool. I worked alongside a dev who I mentored along the way. The client expressed a desire to use me for a second iteration.

EWA Industries

Jan 2010 - Sep 2012

IT Support / Bookkeeping

This was an in-house job where I worked on the bookkeeping and technical aspects of a large plastic sales industry. I worked on bookkeeping, data entry, and internal IT needs such as upgrading, backing up, recovering from malware, and assisting employees.

Vtribes

Feb 2008 - Jun 2008

Ajax Developer / Full Stack LAMP Web Developer

The site offered a premium CMS marketing solution for those trying to market themselves. I worked alongside other developers on the team through the ticketing system. I sent my work, mostly UI improvements and bug fixes, to the subversion repository.
